

Fmi_Connect

Interface Software for Data-downloading into MS Excel

Features

- **Easy-to-use Add-In for MS Excel**
- **Writes data into columns or lines on worksheets**
- **Readout of current measurement values and peak values collected by the force gauge**
- **Continuous readout function for recording series of measurements**
- **Adjustable Start-Trigger and preselection of number of measurement values**

Details

The force gauge will be connected to your computer through the serial interface (as a rule COM₁); an extra measuring card is not necessary. The software provides as a MS Excel Add-In current and saved measurement values of the force gauge.

The Start Cell and the direction in which the data are written (into columns or into rows) can be user-defined. When the continuous readout function is being used, the number of to be transferred single values as well as those per second can be adjusted. It is possible, moreover, to determine the minimum limit value, from which onwards the data collection should start.

Once written into MS Excel, the data can be processed as usual in diagrams or using other MS Office applications.
